Technical Information

Features

Acoustic performance:

Absorption range: 80Hz to 120 Hz
Tuned frequency: 80Hz

Dimensions:
FG | 595x1190x58 mm

Finishing Material:

MDF Lacquer - FG | Furniture Grade

Click on a certain finish for more detailed information

Dimensions:

595x1190x58mm | 8.64 Kg

The Vector Wall Bass Trap is ideal for rooms with low frequency issues, taking full advantage of its small depth to place on walls alongside existing room treatment. With a peak absorption from 80 Hz to 120 Hz the Vector Wall Bass Trap is the bridge between the low and mid frequency absorptions, acting in the "low-high" frequency range.

The Vector Wall Bass Trap is equipped with a double membrane surrounding a central acoustic core. This design allows for a larger membrane - lowering the resonant frequency, whilst increasing the volume of the inner air cavities - packing the most performance into the least volume possible.

Its distinctive design offers an impressive, unique look to your studio, a true trademark of Jan Morel design.
